

Connect your trading ecosystem with our FIX Engine

The “Need for Speed” in trading is paramount, as even small delays can lead to missed opportunities or financial losses.

To overcome these challenges, we have built a Confluent FIX Connector allowing easy real-time data integration across your asset classes.

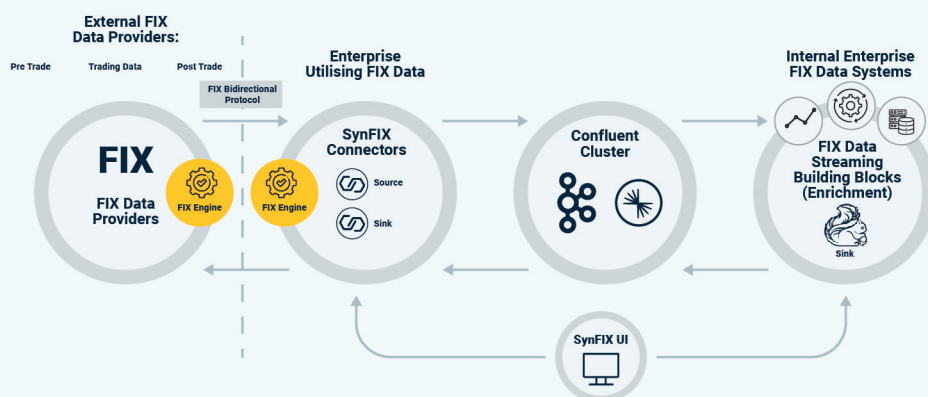

Simplify and speed up the integration of new FIX data sources.

Establish capital markets pedigree

With +25 years of experience within the financial services and corporate banking sector, Synthesis specialises in structuring tailor-made commit requirements for large enterprise customers such as Investec, Citi Bank, Standard Chartered, RMB, and ABSA CIB. We have built strong working relationships with Global ISVs to supplement in-house delivery and improve time to value (TTV).

Our multi-specialised teams include Digital, Data (AI/ML), Customer Experience (Cx), Payments, Regulation Technology (RegTech), Innovations and Security. Synthesis is proudly the only AWS Financial Services Competency Partner in the META region and has been a trusted partner for the JSE for +18 years.

Presenting our Kafka Pattern FIX Connector

The ability to quickly and efficiently connect to new liquidity providers, exchanges, or data sources could give trading operations a substantial edge, providing them with faster access to market data and order execution capabilities.

Mike Stephanou, Rand Merchant Bank.

Real-World Impact

How RMB Achieved Unprecedented Trading Efficiency with Our Solution.

The cross-asset approach of RMB Quants involves looking beyond traditional areas like FX or equities and extending their focus across multiple data sources. The cross-asset approach of RMB Quants involves looking beyond traditional areas like FX or equities and extending their focus across multiple data sources.

The Value Proposition of the Connector Project:

The Connector Project, developed with Synthesis, aims to simplify and speed up the integration of new FIX data sources, previously a lengthy and resource-intensive process. It offers enhanced scalability and efficiency, easing the load on specialised staff. This is especially beneficial in FX and general market trading, facilitating quick integration with various financial entities and meeting the increasing need for real-time or high-frequency intra-day data in areas like regulatory compliance and risk management.

Synthesis is Confluent's trusted partner, having successfully established a data streaming platform that sets data in motion across organisations in South Africa.

Jack Bingham, Confluent,
Enterprise Account Executive, UK & Africa

Deploy our connector on
Confluent Cloud or Connect node
